

## 1, 第一种解决方法

后台代码在被请求的Servlet中添加Header设置:

```
response.setHeader("Access-Control-Allow-Origin", "*");
```

```
response.setHeader("Access-Control-Allow-Origin", "*");
```

在前端JS中需要向Servlet发出请求, 请求代码如下所示:

```
$.ajax({
    url: "your url",
    type: "get or post",
    dataType: "json",
    data: {
        ....
    },
    success: function(data) {
        ...
    }
})

// 指定允许其他域名访问
response.setHeader("Access-Control-Allow-Origin", "*");

// 响应类型
response.setHeader("Access-Control-Allow-Methods", "POST, GET, OPTIONS, DELETE");

// 本次预检请求的有效期, 单位为秒
response.setHeader("Access-Control-Max-Age", "3600");

// 响应头设置
response.setHeader("Access-Control-Allow-Headers", "Content-Type, x-requested-with, X-Custom-Header, HaiYi-Access-Token");
```
