

在android SDK文档中有这样一个类，android.provider.Settings类提供android系统各个页面的跳转常量：
使用实例例：
startActivity(new Intent(Settings.ACTION_WIRELESS_SETTINGS))，即可跳到**android**手机网络设置页面。

如果要launch Mobile Networks Setting页面按如下方法：
Intent intent=new Intent(Settings.ACTION_DATA_ROAMING_SETTINGS);
ComponentName cName = new ComponentName("com.android.phone","com.android.phone.Settings");
intent.setComponent(cName);
startActivity(intent);

如果要进入Networks Operators页面按如下方法：
Intent intent = new Intent(Intent.ACTION_MAIN);
intent.setClassName("com.android.phone", "com.android.phone.NetworkSetting");
startActivity(intent);

如跳转到**辅助功能模块设置界面**

```
Intent intent = new Intent(Settings.ACTION_ACCESSIBILITY_SETTINGS);
startActivity(intent);
/*ACTION_ACCESSIBILITY_SETTINGS 辅助功能模块的显示设置。 */
```
